

PRODUCT PITCH DECK

Kitchen & Bakery Management System

The all-in-one platform that runs your bakery and kitchen - point of sale, recipes, inventory, production workflow, and financials in one clean interface.

Bassil B. / demo environment / 2026

THE PROBLEM

Running a bakery is chaos in four spreadsheets

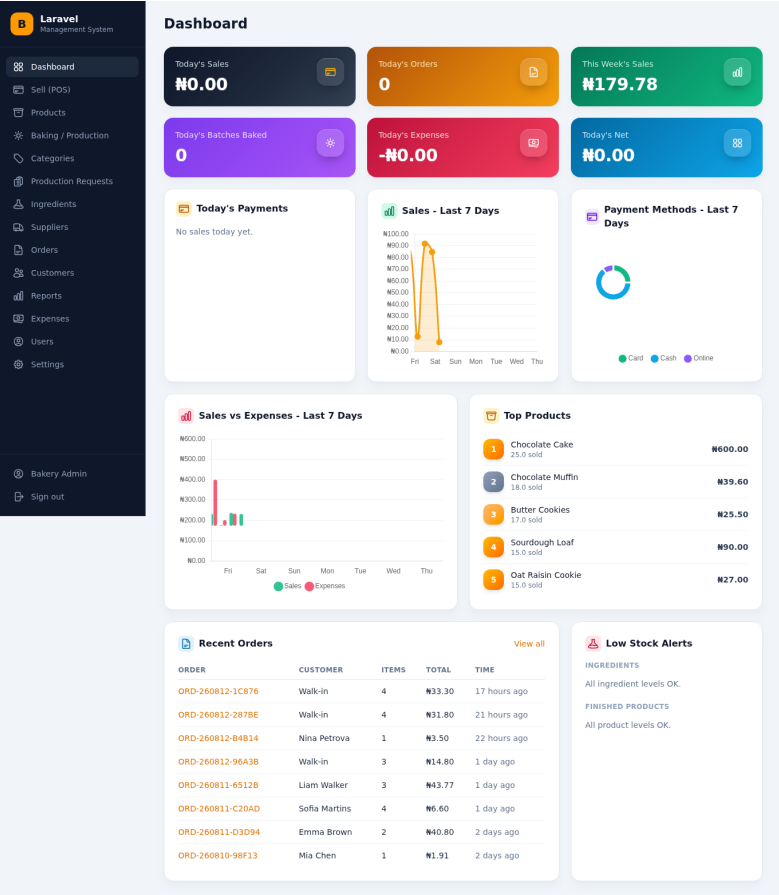

- Sales at the counter, recipes in a notebook, and stock in another file - nothing talks to each other.
- No control over who takes raw materials from the store, so ingredients disappear without a trace.
- Costing is guesswork: nobody knows the real cost of a batch or the true margin of a product.
- End-of-month reports mean hours of manual counting and error-prone arithmetic.

THE SOLUTION

One system. Every workflow. Full control.

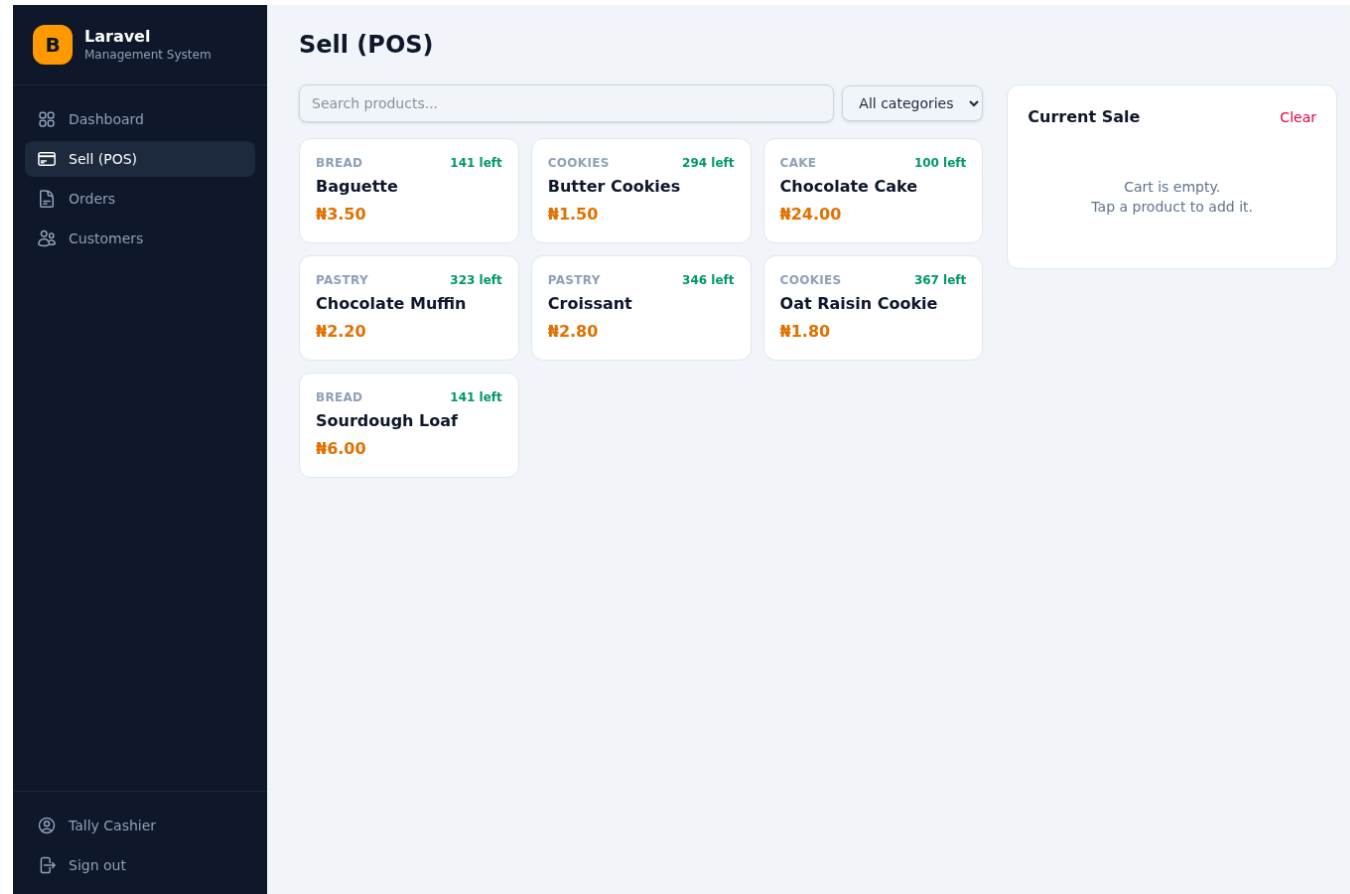

- Tap-to-sell POS with receipts, discounts, holds, and online (Paystack) payments.
- A formal production request workflow: bakery requests, kitchen approves and issues stock.
- Auto-calculated recipes and batch costs - margins are always known.
- Live inventory with full audit trail for every stock movement.
- Date-range financial reports, expenses, and net profit - no spreadsheets.

ORDER DETAIL WITH A PRINT-READY RECEIPT AND ONE-CLICK REFUNDS

CAPABILITIES

What ships in the box

POS & Sales

Cart, discounts, holds, receipts, cash/card/transfer/online, customer linking

Products & Recipes

Categories, active/hidden toggles, bill-of-materials cost engine

Inventory

Ingredients, suppliers, receive stock, adjustments, low-stock alerts

Production

Request-approve-issue-produce workflow with full audit trail

Orders & Customers

History, refunds that restore stock, CSV export, customer profiles

Finance & Admin

Expenses, reports, net profit, users/roles, company settings, Paystack

Role-based access for every team member

Admin

Full access - reports, expenses, users, settings, and every operational area

Cashier

Dashboard (sales), POS, orders, refunds, customers

Bakery Staff

Products, recipes, production batches, and request creation

Kitchen Staff

Ingredients, suppliers, stock receiving, and request approval/issuance

BUILT ON

Modern, secure, proven stack

- Laravel 12 (PHP 8.2+) - battle-tested framework with robust auth and middleware.
- SQLite by default, MySQL/PostgreSQL ready for production scale.
- Tailwind CSS - clean, responsive UI that works on any screen.
- Paystack integration for card and online payments at the till.
- CSV reporting and print-ready receipts out of the box.

Why this matters

- Every ingredient that leaves the store is approved and recorded - shrinkage drops.
- Recipe-based costing means every batch and product margin is known instantly.
- One dashboard replaces spreadsheets for sales, stock, production, and finance.
- Cashiers close sales in seconds with receipts; managers close the month in minutes.
- Role-based access keeps each team in its lane and every action auditable.

From counter to closing books - on one platform.

Kitchen & Bakery Management System replaces the notebooks, spreadsheets, and guesswork with a single source of truth for your bakery.
